

Katiki Sambasiva Rao

Senior Platform Engineer — Cloud & Serverless Architecture

Cloud engineer with 9+ years across AWS and Azure, now on the platform team at MontyCloud, where I lead serverless feature delivery for an enterprise cloud-management product. I set architectural direction for event-driven systems, own upgrade and release readiness across customer environments, and build the automation and CI/CD foundations the rest of the team delivers on. Five years supporting enterprise AWS workloads before that gave me production instincts for reliability, cost and security trade-offs — plus depth in IoT and edge connectivity from medical device platforms. AWS Certified Solutions Architect – Associate. Looking for a lead or architect role where I own a platform and the engineers building it.

platforms

LEADERSHIP STRENGTHS

- **Technical direction.** Architecture decisions for serverless and event-driven systems, from design review to production.
- **Engineering leverage.** Automation frameworks and internal tooling that raise the whole team's throughput.
- **Release ownership.** Upgrade planning, test strategy and post-deployment support across customer environments.
- **Stakeholder fluency.** Requirements gathering with clients, translated into specs engineers can execute.

EXPERIENCE

Senior Platform Engineer

Apr 2024 – Present

MontyCloud Technologies Service LLP • Bengaluru

- Lead design and delivery of serverless features in the DAY2 cloud-management platform, taking capabilities from architecture proposal to production release.
- Own platform upgrades end to end — rollout sequencing, regression and integration test strategy, and post-deployment support — protecting availability for enterprise customers.
- Built automation frameworks and internal tooling that removed recurring manual operations work and freed engineering time for feature delivery.
- Drive technology evaluation for the platform stack, assessing emerging AWS and Azure services and shaping adoption decisions.
- Partner with product and support teams on release readiness, root-cause reviews, and the operational runbooks that follow each launch.

Stack: AWS Lambda, API Gateway, Step Functions, EventBridge, DynamoDB, S3, CloudFormation, Python, Go, FastAPI, Docker, Azure DevOps, GitHub Actions

Cloud Support Engineer

Oct 2019 – Apr 2024

Amazon Internet Services Pvt. Ltd. (AWS) • Bengaluru

- Served as escalation point for enterprise customers' serverless and IoT workloads, designing production architectures around their use cases rather than patching symptoms.
- Reduced customer downtime through proactive monitoring, rapid diagnosis and resolution of infrastructure issues spanning multiple accounts and regions.
- Introduced automation tooling and DevOps practices into customer deployment pipelines, improving release consistency and speed.
- Ran architecture reviews that improved workload performance, resilience and cost efficiency; documented patterns for reuse across the support organisation.
- Mentored newer engineers on serverless and IoT troubleshooting, raising first-touch resolution on complex cases.

Stack: AWS Lambda, API Gateway, IoT Core, Greengrass, IAM, Cognito, SQS, SNS, CloudWatch, CloudFormation, EC2, VPC, RDS, Python, Linux

IoT Developer

Aug 2017 – Oct 2019

Tata Consultancy Services · Hyderabad

- Delivered connected-medical-device IoT solutions: cloud architecture, device-to-cloud communication, and full-stack applications managing device fleets and user access.
- Designed telemetry dashboards that gave clinical and operations teams real-time visibility into device health and usage.
- Led requirements gathering with clients and stakeholders, converting business needs into technical specifications the team built against.
- Coordinated across functional teams to integrate new platform features into existing hospital systems without disrupting service.

Stack: AWS IoT Core, MQTT, Python, Django, Flask, JavaScript, MySQL, Redis, ActiveMQ, JMS, Git, Jira

TECHNICAL SKILLS

Cloud	AWS – Lambda, API Gateway, Step Functions, EventBridge, IoT Core, Greengrass, SQS, SNS, DynamoDB, RDS, S3, IAM, Cognito, CloudWatch, CloudFormation · Azure, Azure DevOps, Azure App Services
Languages	Python (primary), Go, JavaScript, SQL, Bash
Frameworks	FastAPI, Flask, Django, REST API design, OAuth 2.0
Data & messaging	MySQL, Redis, DynamoDB, ActiveMQ, JMS, MQTT
Architecture	Serverless, event-driven and domain-driven design, microservices, Infrastructure as Code, container orchestration, device-to-cloud communication, scalability & reliability engineering
Delivery	CI/CD pipelines, GitHub Actions, Azure Pipelines, Docker, platform upgrades & migration, observability, Agile
Tools	Git, GitHub, Jira, Linux, VS Code

EDUCATION

B.Tech, Computer Science

Gayatri Vidya Parishad College of Engineering · 2017

CERTIFICATION & LANGUAGES

AWS Certified Solutions Architect – Associate

English · Hindi · Telugu
